

TUITION / COACHING INSTITUTE MANAGEMENT SYSTEM

Functional Modules Report

*A detailed description of the system's functions and role-based capabilities,
prepared for management review.*

Prepared for: Project Manager Review
Document Type: System Functional Overview
Date: 31 August 2026

1. Overview

This report describes the complete set of functions that the Tuition / Coaching Institute Management System will provide. The system is intended to centralize the day-to-day operations of a coaching institute — replacing manual registers, spreadsheets, and scattered records with a single, structured platform.

The system covers 17 core functional areas, ranging from student and faculty management to attendance, examinations, fees, and reporting. Each area is described below in terms of what it does, who can use it, what information it manages, and what actions it supports.

1.1 Purpose of This System

- Provide one central platform to manage students, faculty, courses, batches, and daily academic activity
- Reduce dependency on manual registers, paper records, and disconnected spreadsheets
- Give each type of staff member a role-specific view showing only the information relevant to them
- Track academic performance, attendance, and fee status in one place
- Provide institute management with summarized reports for decision-making

1.2 Who Uses the System

The system is designed around five distinct user roles, each with a different set of responsibilities and a correspondingly different set of accessible modules:

Role	Accessible Modules
Administrator	Full access to all modules; institute-wide management and monitoring
Accountant	Dashboard, Batches, Students, Fees & Payments, Reports, Notifications
Teacher	Dashboard, My Batches, Students, Attendance, Timetable, Exams, Assignments, Results, Notifications
Student	Dashboard, My Batch, Attendance, Fees & Payments, Exams, Assignments, Results, My Profile, Notifications
Receptionist	Dashboard, Students, Faculty, Courses, Batches, Fees & Payments, Notifications

2. Functional Modules — Detailed Description

Each module below is described with its purpose, the information it manages, and the specific actions it supports.

Module 1: Dashboard

The dashboard is the landing screen after login and gives every user a quick, role-specific overview of the institute's current status.

What it shows:

- Total number of students and faculty
- Number of active batches
- Revenue and pending fee summary
- Attendance statistics
- Upcoming classes and academic information
- Recent notifications and quick-action shortcuts

Key behaviour: the exact information shown adapts automatically to the logged-in user's role, and the dashboard acts as a launch point to navigate into any authorized module.

Module 2: Student Management

Maintains the complete academic and personal record for every student enrolled in the institute.

Field	Description
Identity	Student ID, name, date of birth, gender, phone, email, address
Guardian details	Parent/guardian name, relationship, parent phone, emergency contact
Academic	Enrolled course, assigned batch, admission date, status
Financial	Total fee, paid fee, pending fee (calculated)
Performance	Attendance percentage

Actions supported:

- Add, edit, and delete student records
- Search and filter the student list
- View a full student profile including fees, attendance, and batch details
- Each student record carries a unique, system-generated Student ID

Module 3: Faculty Management

Maintains records of all teaching staff and their assignments.

Field	Description
Identity	Faculty ID, name, phone, email, subject taught
Professional	Qualification, experience, joining date, status
Financial	Salary
Workload	Number and list of assigned batches

Actions supported:

- Add, edit, delete, and search faculty records
- View a faculty profile showing all batches assigned to that faculty member

Module 4: Course Management

Defines the academic courses offered by the institute (for example JEE, NEET, Foundation, or Board Exam preparation programs).

Field	Description
Course ID	Unique identifier for the course
Name & description	Course title and details of what it covers
Duration	Length of the course
Fee	Standard course fee
Status	Active or inactive

Actions supported:

- Add, edit, delete, and view courses
- View detailed information for any individual course

Module 5: Batch Management

Organizes enrolled students into class groups (batches), each tied to a course, a faculty member, and a schedule.

Field	Description
Identity	Batch ID and batch name
Assignment	Linked course, assigned faculty, classroom
Schedule	Start date, end date, start time, end time, days of the week

Field	Description
Capacity	Maximum capacity, current status

Actions supported:

- Create, edit, delete, and search/filter batches
- View the list of students belonging to a batch
- View the batch schedule and assigned faculty
- Monitor batch capacity to avoid over-enrollment
- System validation prevents invalid or conflicting scheduling information

Module 6: Attendance Management

Records and tracks daily student attendance per batch.

- Attendance is recorded as Present, Late, or Absent
- Teachers and administrators mark attendance for their batches
- Attendance percentage is calculated and shown on student and dashboard views
- Students can view only their own attendance records

Module 7: Timetable Management

Displays the weekly class schedule across all batches.

- Shows batch, subject, faculty, days, time, and classroom for every scheduled class
- Allows any user to understand when and where each batch meets
- System validation prevents time and classroom conflicts between batches

Module 8: Examination Management

Handles creation and tracking of examinations for each batch/subject.

Field	Description
Exam identity	Examination ID, title, date
Scope	Linked course, batch, subject
Scoring	Total marks, passing marks

Actions supported:

- Create, edit, and view examinations
- Enter and view examination results

Validation rules enforced:

- Exam title and date are mandatory
- Total marks must be greater than zero
- Passing marks must be greater than zero and cannot exceed total marks
- Student marks entered cannot exceed the total marks

Module 9: Assignment Management

Manages academic assignments given to students.

Field	Description
Details	Assignment ID, title, description, subject

Field	Description
Scope	Linked batch
Scoring/tracking	Due date, marks, status (Open / Closed)

- Teachers and administrators create and manage assignments
- Students view only the assignments relevant to their own batch

Module 10: Results Management

Stores and manages examination marks and automatically calculates grades.

Field	Description
Result record	Result ID, linked Examination ID, linked Student ID, marks obtained

Validation rules enforced:

- Marks must be numeric and cannot be negative
- Marks cannot exceed the total marks defined for that examination

Automatic grading logic:

- 90% and above → A+
- 80% – 89% → A
- 70% – 79% → B+
- 60% – 69% → B
- 50% – 59% → C
- Below 50% → D

Students can view only their own results.

Module 11: Fees & Payment Management

Tracks each student's fee obligation and payment history.

Field	Description
Fee summary	Total fee, amount paid, pending amount (Pending = Total – Paid)
Payment record	Receipt ID, Student ID, date, amount, payment mode

Supported payment modes: Cash, UPI, Bank Transfer.

Actions supported:

- View student fee status and search students by fee status
- Record new payments and view full payment history
- View pending fees across students
- Print payment receipts
- System prevents any payment amount from exceeding the student's pending fee

Module 12: Reports & Analytics

Provides summarized, institute-level information to support decision-making.

- Total revenue and pending fee summary
- Student count and average attendance across the institute
- Batch-wise student distribution
- Course-wise revenue breakdown
- Financial reports for accountants and broader institute-level reports for administrators

- Options to view, print, and export report information

Module 13: Notifications

Delivers system alerts and reminders to users.

Field	Description
Notification record	Notification ID, title, message, type, date

Notification types: *Warning, Information, Success.*

- Covers fee reminders, assignment announcements, and examination announcements
- Users can mark all notifications as read

Module 14: Settings

Provides institute-level configuration options.

- Set institute name and currency display
- Save institute-wide settings
- Export application data as a backup
- Reset to demo/default data

Module 15: Student Self-Service Portal

A dedicated, restricted view for students to access only their own information.

- My Batch — course, batch, faculty, classroom, schedule
- My Profile — personal, guardian, and academic information plus attendance and fee summary
- My Fees — total fee, paid amount, pending amount, and payment history
- Exams — examinations relevant to the student's batch
- Assignments — assignments relevant to the student's batch
- Results — the student's own examination results

Module 16: Role-Based Access Control

Controls what each user role is permitted to see and do within the system.

- Every role has a defined, restricted set of accessible modules
- Attempting to access an unauthorized page shows an Access Denied view
- Navigation menus adapt automatically based on the logged-in role

Module 17: Data Validation

Ensures information entered into the system is accurate and consistent before it is saved.

- Required-field validation for student and assignment records
- Payment amount must be greater than zero and cannot exceed the pending fee
- Examination marks validation (total > 0, passing > 0, passing ≤ total)
- Result marks validation (≥ 0 and ≤ total marks)
- Invalid input triggers a clear error notification to the user

3. Role-Wise Responsibilities Summary

3.1 Administrator

Has the highest level of access and can manage institute-wide information across every module, monitoring both academic and financial activity.

3.2 Accountant

- View student fee information and record payments
- Track pending fees and review payment history
- View financial reports

3.3 Teacher

- View assigned batches and the students within them
- Mark attendance and view the timetable
- Create examinations and assignments, and enter results
- Monitor academic progress for assigned batches

3.4 Student

- View own batch, attendance, and fee status
- View examinations, assignments, and results
- View and manage own profile information
- View notifications relevant to them

3.5 Receptionist

- Manage student information and front-office records
- View faculty and course information
- Manage batch information and handle fee-related operations
- View notifications

4. Summary

The system consists of 17 interconnected functional modules covering the complete operational cycle of a coaching institute — from student enrollment and batch assignment, through daily attendance and academic activity, to examinations, results, fee collection, and institute-level reporting.

Access to each module is controlled through role-based permissions, ensuring that Administrators, Accountants, Teachers, Students, and Receptionists each interact only with the functions relevant to their responsibilities.

This functional structure forms the foundation on which the system will be built and delivered.
